Los Angeles, CA | (805) 990-7071 | kgulia2003@gmail.com | www.linkedin.com/in/kartikgulia

SUMMARY

Product minded technologist and AI solutions engineer with 3+ years of experience at Disney, NBCUniversal, and Caterpillar leading cross functional delivery of AI driven systems and enterprise workflow automations. Skilled at translating stakeholder needs into shipped solutions — from requirements gathering and roadmap execution to hands-on delivery with engineering, IT, and business partners. Combines technical fluency in AI/LLMs, APIs, and cloud infrastructure with a track record of driving adoption and measurable business impact, backed by a Master of Science in Computer Science (AI Specialization) from the University of Southern California.

EXPERIENCE

AI Solutions Engineer, Disney Entertainment & ESPN Technology — Disney, Burbank, CA June 2024–Present

- Created and led product roadmap for an AI automated annual support metrics analysis and reporting pipeline covering 100+ applications, cutting down the manual process that consumed 3 to 4 months of director level effort each year to under one week.
- Designed and launched an AI Decommission Autofiller to production, automating data extraction from Jira, Confluence, and ServiceNow into a structured Airtable review workflow so non technical reviewers could validate and approve records with minimal engineering support, and building reconciliation checks that delivered 5 legacy decommissions with zero data loss.
- Own the full product lifecycle for 21 finance and accounting applications, from onboarding and hypercare through L2 support, health and lifecycle stage tracking, and end of life decommissioning, serving as the single point of contact between the clients and engineering to handle P1/2 issues, escalations, maintaining documentation, and reporting metrics.
- Drive AI tool enablement for 20+ engineers, analysts, and IT partners across 3 teams, running hands on sessions and building reusable n8n and Claude workflows that became the default for Confluence and ServiceNow reporting, with sustained weekly use six months post rollout.
- Partner with product managers, developers, and IT specialists to scope, design, and ship automations and system enhancements, translating business needs into technical requirements

AI Researcher, Wang Bioinformatics Lab — UC Riverside CSE, Riverside, CA Nov 2023–Jan 2025

- Leveraged generative AI models to translate complex analyses of molecular physical and chemical properties into executable MassQL code, enhancing data interpretation efficiency by 70%
- Applied advanced prompt engineering and autonomous reasoning to improve ChatGPT assistant accuracy from 41% to 98.7%
- Conducted extensive testing across 100+ test scripts, using a data-driven approach to refine prompts and response processing, enhancing user interaction quality and model responsiveness
- Authored documentation and best-practice guides, on prompt engineering, API usage, and system integrations, that became the team's onboarding standard for new contributors.

IT Project Management Intern, Digital Analytics — Caterpillar, Chicago, IL June 2023–Sept 2023

- Drove roadmap execution for customer onboarding, eCommerce, and SOS fluid analysis initiatives, coordinating internal and external stakeholders across 50+ working sessions and resolving blockers to keep delivery on schedule.
- Engaged 20+ stakeholders to pitch new product and software concepts, partnering with Project Managers to define implementation roadmaps
- Led a cross-functional team of 5 in the Cat Hackathon, shipping a revamped Cat Inspect application that improved inspection accuracy by 50%
- Built a centralized Confluence dashboard giving stakeholders visibility into 20+ ongoing projects

DevOps Intern, Monitoring & Control — NBCUniversal, Los Angeles, CA June 2022–Sept 2022

- Delivered an API program for SFPs (small form-factor pluggable), from concept to global rollout across 180 stations and 800+ devices
- Managed the Skypath cloud system and its cross-system API integrations, automating update and issue reporting for hundreds of device drivers
- Monitored and managed core AWS services (EC2, S3, Elemental, Lambda, IAM) supporting production operations

EDUCATION

University of Southern California — M.S. Computer Science, AI Specialization Aug 2024–May 2026

University of California, Riverside — B.S. Computer Science, with Honors Sept 2021–June 2024

CORE STRENGTHS

Product Strategy & Roadmap · Cross-functional Leadership · Stakeholder & Vendor Management · AI/LLM Product Development · Requirements Gathering · Agile & Waterfall Delivery · Process Improvement · Product Lifecycle · Business Strategy · Customer Relationship Management

TECHNICAL SKILLS

Product & Delivery: Roadmapping, Requirements Gathering, A/B Testing & Experimentation, Agile, Waterfall, OKR Development & Tracking

Collaboration & Tools: JIRA, Confluence, ServiceNow, Airtable, PowerBI, Slack, M365

AI & Engineering: Python, LLMs, REST APIs, n8n, Amazon Q, Postman, C++, JavaScript

Cloud: AWS (EC2, S3, Lambda, IAM), Azure, Docker, Kubernetes, CI/CD, Git/GitHub
